ISCO Industries adds distribution site in Stockton, California

(LOUISVILLE) September 2006— Adding to its rapid expansion over the past three years, ISCO Industries, the nation's largest distributors and suppliers of polyethylene (HDPE) piping products, has announced the opening of a new stocking distribution site in Stockton, California, an hour east of San Francisco.

"This new facility will allow us to better serve our rapidly growing customer base in Northern California and surrounding areas," said Mark Kirchdorfer, Vice President of Operations for ISCO Industries. "We already have a strong West Coast presence with a fabrication plant in Bakersfield that opened six years ago, and this new Stockton location will complement it with regional access to HDPE pipe, fittings and fusion equipment," said Kirchdorfer.

The large, 7,500 square foot facility sits on 1.5 fenced acres just east of Interstate 5. HDPE pipe up to 63" and fittings are in stock, ready for delivery, and customers can buy or rent McElroy fusion equipment right at the location.

"The addition of this facility allows us to be the full service HDPE distributor we need to be for our customer base in the area," said ISCO President Jimmy Kirchdorfer. "We wanted a solid base to work from in service to the Golden State, and Stockton geographically has proven to be ideal," he said.

The address of the new facility is 40 South Union Street, Stockton, California. Both the Distribution Site Manager and Field Fusion Technician at the new location can be reached by calling (800) 345-4726.

ISCO Industries stocks and sells HDPE pipe, fittings and fabrications for various industrial, municipal, environmental, golf and landfill applications throughout the United States and Canada. The company also rents, services and sells McElroy fusion equipment. Along with the addition of the new Stockton, California facility, ISCO has stocking locations in the states of Maryland, Colorado, Connecticut, Washington, Michigan, Alabama, Florida, Kentucky, South Carolina, Oklahoma, Texas, Wisconsin, Utah, Arizona, Nebraska, Illinois and Alberta, Canada – inventorying large stockpiles of pipe, usually within one day's delivery of most projects.
